

Drain Clean

3912 - 2x1 Gal.

Enzyme-Based Drain Cleaner

Drain Clean uses naturally occurring live bacteria that eats the grease and clogs before they can form. Drain Clean produces protease, lipase, amylase and cellulase for breakdown of any kind of blockage. It also neutralizes odors, especially hydrogen sulfide, or rotten egg odor.

DIRECTIONS FOR USE:

Commercial drains: add to slow or troublesome drain at a rate of 16-20 ounces per day until drain returns to free flowing performance level. Maintain regularly afterwards.

Commercial grease traps: for initial treatment, run warm water for 1 minute into drain nearest grease trap. Add 1 quart of product per 250 gallons of trap capacity per day for 5 days. Do not use this product with disinfectants, chlorinated products, acids, caustics, and boiling water as it affects the performance of the product.
