

Biozyme

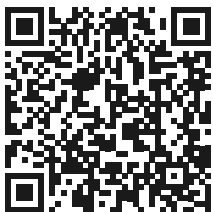

4312 - 2x1 Gal.

Enzymatic Cleaner

Biozyme is a biodegradable, enzyme based solution which is formulated to break down a variety of organic material safely and effectively. It has excellent enzyme production which enables it to attack the cause of the odors and stains. Biozyme works great on sink and floor drains, urine and food stains, or even as a general purpose deodorizer.

DIRECTIONS FOR USE:

Fixtures and sinks: spray the concentrated solution liberally allowing it to dwell for a minimum of 30 minutes. Floors and toilets: spray the concentrated solution liberally allowing it to dwell for a minimum of 30 minutes, then mop. Drains: spray inside the drain and around the drain walls if possible using 2-4 ounces twice a week. For problem drains or grease traps. Talk with your Advantage Chemical representative. Carpet stains: spray undiluted biozyme liberally and brush in a circular motion for complete penetration. Cover with a wet, white terry towel for one hour for optimum results.
